# SMART CALF SYSTEM

# KEEP YOUR CALVES UNDER CONTROL WITH SMART CALF SYSTEM

The automatic feeders from Förster-Technik have always provided a lot of information about feed consumption, drinking speed and further parameters, thus giving valuable details on the well-being of the calves. With the new „Smart Calf

System“ awarded with the DLG Innovation Award 2016, new sensors and development parameters are now utilized to estimate the health status and development of the calf. As a result, diseases can be detected earlier and the necessary

treatments can be performed in time. At the same time, many practical enhancements are introduced, such as e.g. the fully automatic cleaning of the suction hoses and the teat as well as the swiveling feeding station.

## **SMART NECKBAND** - The light will tell if you're unwell!

- Significantly reduced medication and treatment costs thanks to early sickness detection via activity measurement
- Improved animal monitoring by LED display on the collar
- Easy control via mobile devices and PC
- Flexible monitoring and control via the Internet - wherever you are
- Low costs thanks to multiple use

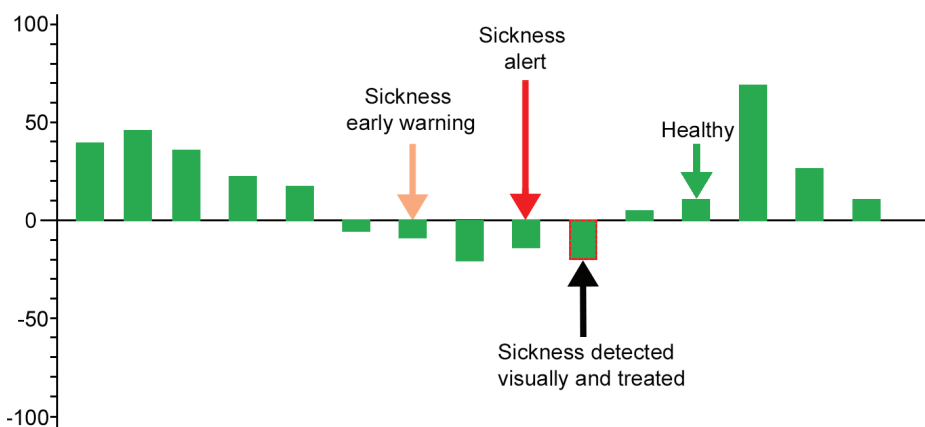

### SMART ACTIVITYBOX

- Better milk digestion by imitating the natural udder butting movements
- Reduced mutual suckling due to slower drinking intake
- Work- and time-saving thanks to Auto-Lern-Function
- Sickness early warning by measuring the butting activity
- Reduced risk of infection thanks to fully automatic cleaning of the suction hose and teat
- Increased operational safety by temperature sensor with frost protection function located at the teat

### Health Index

### HEALTH INDEX

- Summarized evaluation
- High level of confidence through combination of several parameters
- Sickness early warning
  - Special observation of the animal
- Sickness alert
  - Veterinary/Treatment

### TIP:

Easy download of the CalfCloud App for IOS and Android

#### SMART WATER STATION - Intelligent water measurement

- Enables animal-specific weaning
- Prevents growth problems during weaning
- Gives indications about sicknesses and status of rumen development
- Also usable for weaned animals
- Half- or full body scales may be connected

#### TIP:

Have a look at the Smart Calf System in action:

#### SMART FEEDING STATION

- Option to fold station upwards into a 90° position if mounted on a wall or 180° position if mounted on the feed fence
- Tubular frame makes station bright and clear.
